

Enhanced HTML5 audio players

INTRODUCTION

In addition to enhanced video players, there are also enhanced audio players. While there is room for lots of enhancements in a video player, the number of features that can be added to audio players is rather limited. Usually they come with support for playlists, shuffle mode, and a better look'n'feel suitable for mobile Web applications.

Read [this article about 10 enhanced HTML5 audio players](#), for example.

EXAMPLES

[Chameleon audio player \(commercial\)](#):

[Audio.js](#): an open source JavaScript library for creating an enhanced audio player. Native JavaScript with fallbacks in Flash, etc.

🎵 audio.js

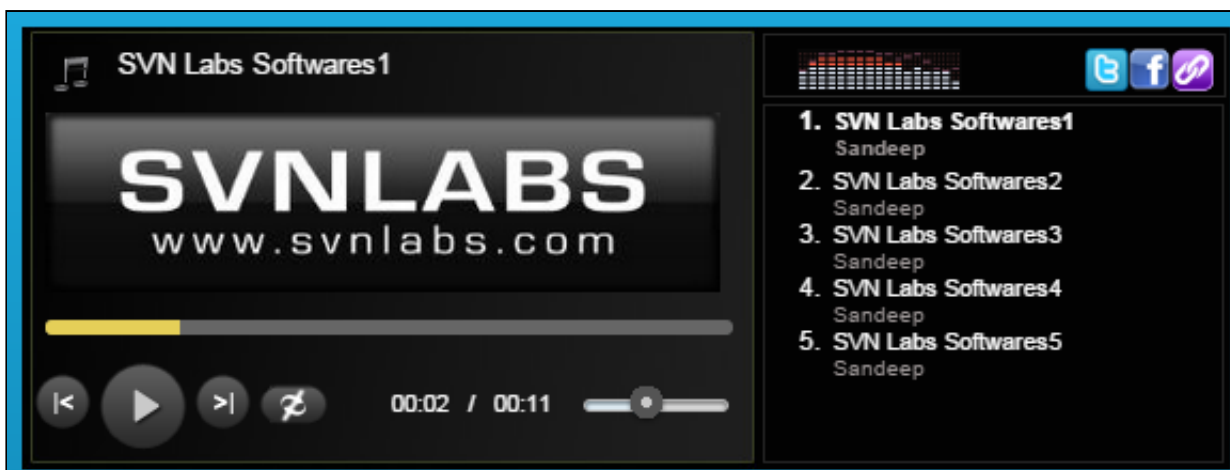

audio.js is a drop-in javascript library that allows HTML5's <audio> tag to be used anywhere.

It uses native <audio> where available and an invisible flash player to emulate <audio> for other browsers. It provides a consistent html player UI to all browsers which can be styled using standard css.
